Assignment four

For RiscOS, deliver a research report describing the design and implementation of a device driver for the Raspberry Pi Sense Hat. Test your implementation using the programs you have developed in Assignment two.

Finally, you have to amend the device driver in such a manner that the device driver controls the LEDs which display several road-signs, like a red cross indicating that a traffic-lane is out of order, or a green arrow indicating that the traffic has to switch traffic-lanes, for example, from the left traffic-lane to the right traffic-lane.
